DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 2, 4, 7-10, 13-19, 23-25 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The present invention describes a transmitter, comprising an upconverter for converting a first frequency signal to a second frequency signal, the second frequency signal including in-phase components and quadrature phase components; a compensator including a plurality of filter units for compensating at least one of gain distortion and phase distortion introduced into the second frequency signal by at least the upconverter, the plurality of filter units including a first set of filter units configured to filter the in-phase components and quadrature phase components, output of the first set of filter units producing at least one of a gain compensated in-phase signal and a phase compensated in-phase signal, and a second set of filter units configured to filter the in-phase components quadrature phase components, output of second set of filter units producing at least one of a gain compensated quadrature-phase signal and a phase compensated quadrature-phase signal; a compensator constructor, based on a channel model of at least the upconverter that includes an in-phase channel, a quadrature phase channel and cross coupling channels between the in-phase and quadrature phase channels, estimating the in-phase channel, the quadrature phase channel, and the cross coupling channels between the in-phase and quadrature phase components, and configuring filters taps for the first and second set of filter units; and a predistorter to

Art Unit: 2611

predistort the first frequency signal. The closest prior art, Wright et al. (US 5,990,734) and Gu (US 2003/0072393 A1) together discloses a similar system but fails to disclose a compensator constructor, based on a channel model of at least the upconverter that includes an in-phase channel, a quadrature phase channel and cross coupling channels between the in-phase and quadrature phase channels, estimating the in-phase channel, the quadrature phase channel, and the cross coupling channels between the in-phase and quadrature phase components, and configuring filters taps for the first and second set of filter units. This distinct feature has been added to the independent claims 1, 14, and 17; thus rendering claims 1, 2, 4, 7-10, 13-19, 23-25 allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
